Pasture Stocking Worksheet

Printable field reference

Fill this in at the calculator online, or work it by hand with the formulas below. Use conservative utilization values unless you have good grazing records.

1. Your inputs

Solve for (circle one):

☐ Grazing days ☐ Head capacity

Pasture size (acres) _____

Forage production (lb DM/acre) _____

Utilization (%) _____

Avg animal weight (lb) _____

Daily intake (% body weight) _____

Head count (if solving for days) _____

Grazing days (if solving for head) _____

2. Formulas

```
Available forage (lb) = acres × forage (lb/ac) × utilization%
Daily intake/head (lb) = body weight × intake%
Grazing days = available forage ÷ (head × intake/head/day)
Head capacity = available forage ÷ (days × intake/head/day)
AUMs = available forage ÷ 780 (lb DM per AUM)
```

3. Worked example

40 ac, 2,500 lb/ac forage, 40% utilization, 1,200 lb cattle @ 2.5% intake, 35 head:
Available forage = 40×2,500×0.40 = **40,000 lb** · Intake/head/day = 1,200×0.025 = **30 lb**
Grazing days = 40,000÷(35×30) ≈ **38 days** · AUMs = 40,000÷780 ≈ **51.3 AUM**

4. Your numbers

Available forage (lb)	acres × forage × util%	_____
Intake per head per day (lb)	BW × intake%	_____
Grazing days (est)	forage ÷ (head×intake)	_____
AUMs from available forage	forage ÷ 780	_____
Stocking rate (AUM/ac)	AUM ÷ acres	_____
